

Book Review Android App (Kotlin)

Student Information

Student Number: st10470497

Project Description

This Android application was developed using **Kotlin in Android Studio**.

The app allows users to add book reviews, view all saved books, and calculate the average rating.

The project demonstrates the use of:

- Arrays (parallel arrays for title, author, rating, comment)
- Loops (displaying books and calculating average rating)
- Screen navigation (Main Screen → Detail Screen)
- Error handling and user feedback
- Dialog input forms
- GitHub version control

Features

Main Screen

- Add Book Review button
- View Reviews button
- Exit App button

When “Add Book Review” is clicked, the user enters:

- Book title
- Author

- Rating (1–5)
- Comment

Validation is applied to ensure required fields are filled and ratings are valid.

Detailed View Screen

- Display Books Button
→ Shows all books using a loop.
- Average Rating Button
→ Calculates and displays the average rating using a loop.
- Back Button
→ Returns to Main Screen.

Programming Concepts Used

- Parallel Arrays
- For Loops
- Intents for navigation
- AlertDialog for input
- Error handling with Toast messages
- Clean, commented Kotlin code

Screenshots

1. Source Code

Screenshot showing MainActivity.kt

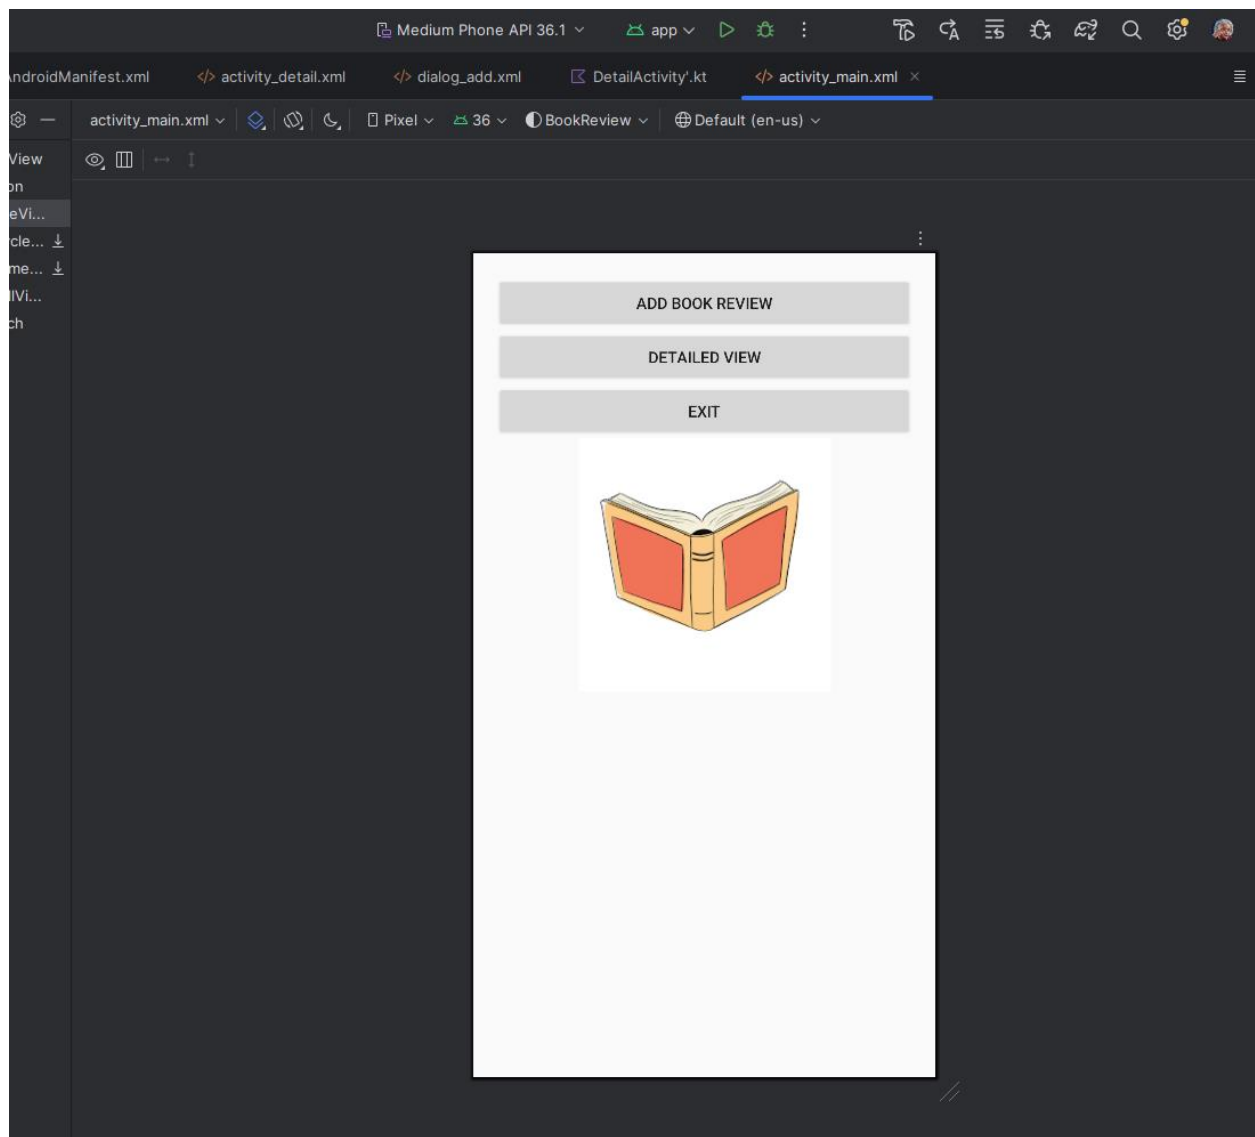

DetailActivity.kt.

2. Main Screen

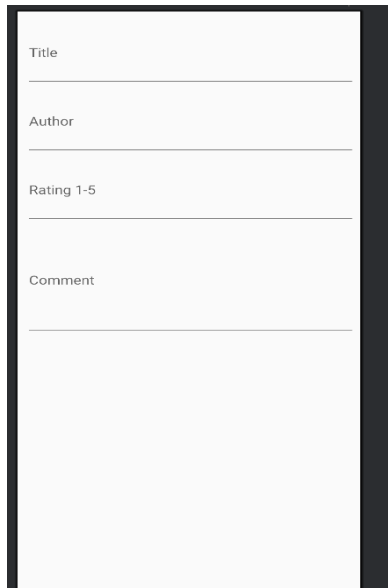

Shows buttons:

- Add Book Review
- View Reviews
- Exit

3. Add Book Dialog

Shows input fields for title, author, rating, comment.

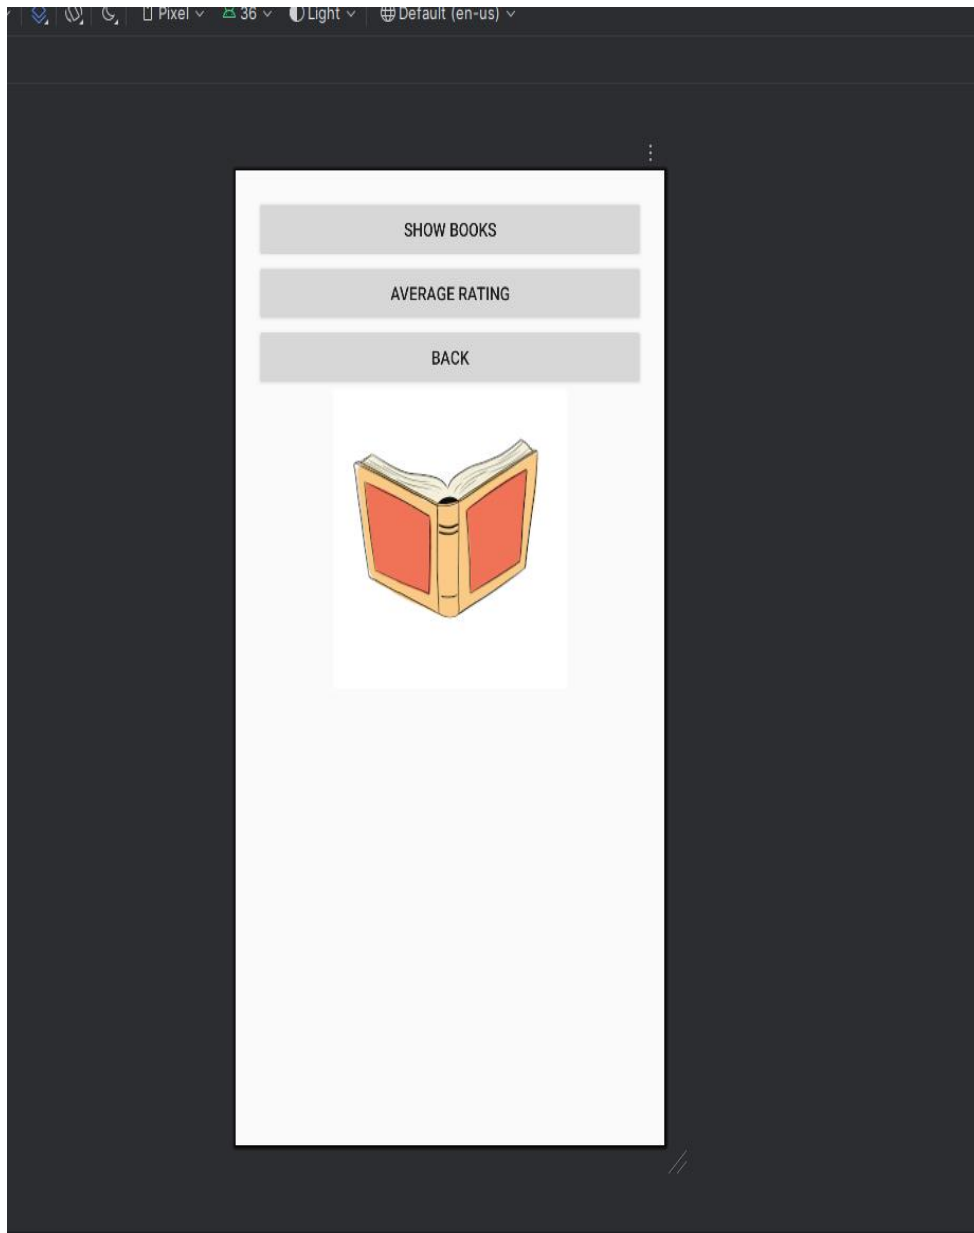

A vertical form with four input fields. The first field is labeled 'Title', the second 'Author', the third 'Rating 1-5', and the fourth 'Comment'. Each field has a horizontal line below the label for text entry. The form is set against a light gray background with a dark gray border on the right side.

4. Detailed View Screen

Shows:

- Display Books
- Average Rating
- Back button

5. Emulator Running

Screenshot of the app running in Android Emulator.

Screenshot Explanations

(Main Screen)

This screen allows the user to add book reviews, navigate to the detailed view, or exit the app.

(Add Dialog)

This dialog collects book details and validates user input.

(Detailed View)

Displays all stored books and calculates average rating using loops.

(Emulator)

Shows the application running successfully.
